HISTORIC AMERICAN ENGINEERING RECORD

WHITE SANDS SPACE HARBOR AREA 1, RUNWAY 23/05
(Space Shuttle Landing Facility Area 1, Runway 23/05)

HAER No. NM-28-B

Location: White Sands Missile Range
Extending 35,000' in a southwest/northeast direction,
intersecting with Runway 17/35 to form an X-shaped
footprint
White Sands vicinity
Doña Ana County
New Mexico

U.S.G.S. 7.5 Minute Las Cruces, New Mexico,
Quadrangle, Universal Transverse Mercator Coordinates
(center of runways): E 32.944408 N 106.41993 Zone 13S,
NAD 1983.

Construction: 1977-1978

Architect: Not known

Builder: Not known

Present Owner: Commander, U.S. Army White Sands Missile Range,
New Mexico 88002-5018

Present Use: Vacant

Significance: Runway 23/05 was an essential component of the White
Sands Space Harbor (WSSH) from 1976-2011. It has a
direct association with the U.S. Space Shuttle Program
(SSP) as the site of the landing of Space
Transportation System (STS)-3 *Columbia* in March 1982;
this is the only STS landing to take place outside
Edwards Air Force Base in California and Kennedy Space
Center in Florida. Runway 23/05 is considered to have
national significance and is eligible for listing in
the National Register of Historic Places (NRHP) under
Criterion A for its association with the NASA SSP with
a period of significance of 1976-2011. Because it

achieved significance within the past fifty years,
Criterion Consideration G also applies.

Report

PART I. HISTORICAL INFORMATION

A. PHYSICAL HISTORY

1. DATE OF CONSTRUCTION

Runway 23/05 was constructed from 1977-1978.

2. ENGINEER

Not known.

3. BUILDER/CONTRACTOR/SUPPLIER

Not known.

4. ORIGINAL PLANS

Not available.

5. ALTERATIONS AND ADDITIONS

The Runway is constructed of a compacted, natural gypsum surface and has been upgraded with modern navigational aids such as lighting and asphalt directional markings.

Once the runway was abandoned in 2011, routine maintenance ceased. Due to the harsh desert environment, the runway began to deteriorate quickly. The U.S. Army initiated occupation of WSSH in the summer of 2012.

PART II. STRUCTURAL/DESIGN INFORMATION

A. GENERAL DESCRIPTION

1. CHARACTER

Located in Area 1, the three natural surface gypsum runways, including Runway 23/05, are located within a 10-square mile area at WSSH. The runways are constructed of compacted gypsum sand with a 1-2" thick soft top layer and a hard-paved under layer. Due to the harsh desert environment, the runways required constant grading, repairs, and maintenance.

Each of the three runways duplicates a shuttle landing runway: 17/35 replicates the runway at Kennedy Space Center in Florida; 23/05 replicates the runway at Edwards Air Force Base in California; and 20/02 replicates the Transoceanic Abort Landing (TAL) runways in other countries.

Runways 17/35 and 23/05 cross each other at their approximate center lines, creating an X shaped site plan. Runway 17/35 is oriented along the north-south axis and 23/05 along the east-west axis. Both runways are 15,000' in length with 10,000' overruns at either end. Both runways are 300' wide with 300' wide shoulders flanking both sides. Navigational aids such as lighting and markings made of asphalt are located along the entire length of both runways.

At 1,000' into the overruns at runways 17 and 23 are two portable xenon light trailers, one on each side of the runway. At 7,500' into each overrun are the Nominal Aimpoints; at 6,500' into the overruns are the High-Wind Aimpoints. Both High-Wind Aimpoints in Runway 17/35 and the east Aimpoint of Runway 23/05 contain PAPI lights. At 2,000' into the actual runways, at each end, are Inner Glide Slope (IGS) Indicator Bar/Ball lights, except on Runway 05.

Runway 20/02 is located in the northwest quadrant created by the intersection of Runways 17/35 and 23/05. Runway 20/02 is oriented along a northeast-southwest axis and measures 19,800' in length and 200' in width. This runway does not feature overruns.

Navigational aids such as lighting and markings made of asphalt are located along its entire length. This runway does not have maintained overruns.

At 6,500' from the northeast end of runway 20 is the Nominal Aimpoint and at 5,500' is the High-Wind Aimpoint with PAPI lights. At 2,000' into the runway at the northeast end are the IGS Bar/Ball lights.

Within the northwest quadrant of the intersection of Runway 17/35 and 23/05 is a Helicopter Staging Area, consisting of a natural surface landing pad for eight helicopters. The pad features a row of H-shaped markings made of asphalt.

A shuttle towway, approximately 400' wide and constructed of compacted natural surface gypsum, begins at the southern terminus of Runway 17/35 and continues southwest along Range Road 10 where it terminates at the Deservice Pad in Area 2.

2. DESCRIPTION

The following is a more detailed description of Runway 23/05, also known as "Edwards."

Runway 23/05 is 35,000' long and 900' wide runway with runway markings and navigational aids, including: two sets of Precision Approach Path Indicator (PAPI) lights, IGS Ball/Bar lights, touchdown markers, distance-to-go markers, xenon lights, nominal night strobes, and runway side lights.

Runway 23/05 was constructed from 1977-1978 to replicate the runway located at the Edwards Air Force Base near Los Angeles, California. The runway was improved in 1992 with upgraded navigational aids such as lighting.

Once the decision was made in 1984 for the Orbiter to land regularly at KSC, Edwards AFB became the primary backup and WSSH would be used only in the event that the shuttle could not land at KSC or Edwards AFB. After 1984, the primary use of the runways at WSSH was astronaut training, allowing pilots to become

familiar with the Orbiter's primary backup landing site at Edwards AFB.

3. CONDITION OF FABRIC

When documented in March 2012, the Runway had been abandoned for over six months and was in fair condition. Due to the harsh desert environment and lack of maintenance, the runway had quickly deteriorated due to shifting sands, flash floods, and extreme temperature variations.

B. CONSTRUCTION

The Runway is constructed of compacted natural surface gypsum with landing aid markings made of asphalt.

C. MECHANICAL/OPERATION

The Runway does not feature any mechanical equipment, with the exception of navigational aids, which are documented separately.

PART III. SOURCES OF INFORMATION

A. ENGINEERING PLANS AND DRAWINGS

There are no known engineering plans or drawings of the Runway, however, plans were created around 1988 for construction of the asphalt navigational markings.

B. EARLY VIEWS AND HISTORICAL DATA

Historic photographs and maps of the WSSH, including the Runways, are very limited. Some of these views can be found on pages 21, 24, and 25 of this document. All views are captioned and dated as available. The other historical data comes from a variety of sources cited in the Bibliography below.

The historic photographs and most of the historical data used in this documentation came from sources within WSTF and WSSH. Other more current imagery was obtained from the online WSTF Media Archive. Many of the original photographs have been donated to the WSMR Museum for digitization and curation. A body of recent aerial photographs were located and photocopied for inclusion in the HAER document to supplement the current ground photography.

C. INTERVIEWS

The following NASA and WSMR employees were interviewed for this documentation.

Robert E. Mitchell, WSTF Manager, September 2011.

Frank Offutt, WSSH Manager, September 2011.

Timothy Davis, WSTF Historic Preservation Officer, September 2011 and March 2012.

Bill Godby, WSMR Historic Preservation Officer, September 2011.

Doyle Piland, WSMR Museum Archivist, September 2011.

Dennis G. Perrin, NASA Johnson Space Center, Houston, Texas, and
WSTF Facility Manager (1975-1989), June 2013.

E. LIKELY SOURCES NOT YET INVESTIGATED

Research was conducted at WSSH and WSTF using primary and
secondary sources. Sources that were not investigated that may
contain secondary information are archived at NASA's Lyndon B.
Johnson Space Center in Houston, Texas.

Additional oral history interviews with other engineers and
technicians could also prove useful.

PART IV. PROJECT INFORMATION

In 2011-2012, New South Associates (NSA), under contract with InoMedic Health Applications, LLC (IHA) of Kennedy Space Center, Florida, and in coordination with NASA and the U.S. Army, conducted background research and a historic architecture survey of resources at the NASA WSSH. The survey included the documentation and evaluation for NRHP eligibility for seventy-two resources located in four distinct areas. Based on this research, NSA determined that no properties remain at WSSH from the period prior to NASA acquisition in 1963 except for the footprint of the packed gypsum Runway 17/35.¹

NSA recommended that the three NASA WSSH Runways and the Control Tower in Area 1 were individually eligible for listing in the NRHP and eligible as contributing resources to the "WSSH Shuttle Landing Facility District" under Criterion A and Criterion Consideration G for their association with the NASA SSP. None of the other sixty-eight inventoried properties were recommended individually eligible for listing in the NRHP due to lack of historical association with the NASA SSP or other historic contexts, lack of unique design or construction features, or insufficient integrity; however, nineteen of these properties, all of which lie within Area 1, were recommended as contributing resources to "WSSH Shuttle Landing Facility District," even though they were not recommended individually eligible for the NRHP. The historic district contains a total of twenty-eight resources: twenty-three are contributing and five are non-contributing.

After formally ending the SSP on August 31, 2011, NASA disposed of the WSSH and released use of the property to the U.S. Army WSMR. The property transfer was a federal undertaking on federally-owned property and subject to compliance with Section 106 of the NRHP Act of 1966, as amended. The undertaking resulted in an Adverse Effect to the NRHP-eligible WSSH Shuttle

"Historic Architecture Survey and National Register of Historic Places Evaluation of the NASA White Sands Space Harbor on the U.S. Army White Sands Missile Range, Doña Ana County, New Mexico." New South Associates, Stone Mountain, Georgia, 2012. Unpublished report on file at NASA WSTF, Las Cruces, New Mexico.

Landing Facility District. To mitigate the adverse effects, NASA completed HAER Level II documentation of the historic district and relocated the Control Tower to the WSMR Museum for conservation, exhibition, and public interpretation.

The mitigation plan was defined in a Memorandum of Agreement (MOA), executed between NASA, the U.S. Army, and the NM-SHPO in August 2012. The properties within the historic district were documented with large format photography in March 2012.
