# DE HOROLOGIO HORIZONTALI.

HOrologiū horizōtale in q̄uis habitatione hoc modo conficietur. Distensis pedibus circini ad latus quadrantis horologii horizontalis ī planicie quadam circulum describe. cuius diametro designata alterum semicirculorum spaciis horariis designandis accommoda. Eius itaq; semicirculi arcum diuide p̄ medium: & a puncto medię incisionis ad cētrum circuli duc lineā rectam: quę erit horę duodecimę. diameter autem circuli dudum lineata duplici horę sextę uidelicet antemeridianę et post meridianę inseruiet. Quę res ut definitius exponi possit: arcū semicirculi oppone pectori tuo ita ut linea horę duodecimę aduersus te porrigatur. Sic ergo diametro circuli in duas semidiametros resoluta: dextra quidem semidiameter horam sextam antemeridianam repręsentabit. sinistra autem sextam postmeridianam. Reliquas autem horaȝ lineas hoc pacto inscribes. Pone filum quadrantis ad scalam latitudinum & moue īdicem id est nodulum filo adhęrentem ad eleuationem poli in scala signatam. Deinde translato indice ad lineam horę primę habebis in arcu quadrantis extremo inter filum extensum & latus sinistrū quadrantis distantiam unius horę a meridie. quam distātiā circino acceptā traduc ad semicirculū horologii futuri figēdo scilicet altey pedē circini in extremo pūcto lineę horę duodecimę: alteri? autē circūducti utrīq; uestigiū nota ī arcu semicirculi. duo q; puncta sic facta cum cētro horologii cōtinua per duas rectas: quaȝ dextra quidē undecimā horā significabit: sinistra autē primā post meridiē. Rurs? pone īdicē ad lineā horę secūdę: & habebis distātiā duaȝ horaȝ a meridie int̄ filū extēsū lat? q; q̄drātis. Hāc distātiā trāsfer sicut ātea ad circū ferētiā horologii. factis q; duobus pūctis: ac ipsis cum centro horologii copulatis dextra quidē linea erit horę decimę: sinistra autē horę secundę.

Non aliter efficies reliquas horologii lineas posito indice super cęteras horarum lineas in quadrante. Ad hunc modum semicirculus horologii duodecim horarum spaciis distinguitur. Quum autem dies ęstiui pluribus q̄ duodenis constent horis: reliquas horarum distantias hac uia deprehendes. Quanta est intercapedo quintę et sextę horarum in circumferentia horologii: tantum officio circini adiunge utriq; horę sextę: factis q; per pedem circini uagum duobus punctis: ac eis cum centro per lineas rectas copulatis: dextra quidē horam quītam ante meridianam: sinistra uero septimā postmeridianam repręsentabit. Item sumpta similiter intercapedine duarum horarum quartę sextę q;: ac ea utrinq; ad horam sextam adiūcta: si ut prius duas rectas duxeris: dextra quidem horam quartam ante meridianam: sinistra octauam postmeridianam cōmonstrabit. Cęterum descriptis iam lineis horariis pone filum quadrantis ad numeꝝ eleuationis poli in habitatione tua: qui per tabulam regionum deprehenditur. mox enī apparebit angulus quidam filo ipso et latere quadrantis graduato contentus. cui ęqualem fac ex tabula lignea aut ex lamīa ferrea. eum q; angulum ad lineam horę duodecimę sic applica ut cuspis eius cum centro horologii conueniat. supficies autem āguli rectissime īnitat' plānicie horologii neutrorsum uidelicet declinans. Poteris etiam si libeat ex centro horologii educere filum ferreū secūdū quantitatem anguli memorati. erit q; usus eius idem cum usu anguli: utriusq; umbra horas īdicante. Hactenꝰ de fabrica. nūc de positione horologii tractandum. quę haud cōmode sine linea meridiana compatur. Est autem uulgaris lineę meridianę īuētio ad būc fere modū. ī plano ad ęquidistantiā horizontis posito describe circulum quantumlibet. in cuius centro fige stilū teretem sic ut cacumen eius quaq̄uersum ęqualiter distet a circumferentia circuli. Ea autem longitudine sit stilus ut umbra eius breuissima quę fit in meridie intra circulum terminetur

Obſerua itaq; duaſſtili umbras ęquales antemeridianam & poſt meridianam: quarum uidelicet utraq; ad circumferentiam circuli deſinat. factis q; duobus punctis ad terminos umbraꝝ arcꝰ interceptus per ęqua diuidatur: punctus q; medię inciſionis cū centro circuli copuletur: quę quantuncūq; etiam utrinq; extenſa erit linea meridiana quā quęrebas. Cui iam ſuperimpone lineā borę duodecimę horologii ita ut ſemicirculus horarius ad ſeptē triones ſpectet. Sole itaq; radiante umbra anguli ſup̄ memorati aut fili ferrei horas indicabit. Poteris autem ex una linea meridiana q̄ facillimē innumeras alias elicere. Nam ī ipſo puncto borę duodecimę ubicunq; perpendiculum ex manu demiſeris: ſi in umbra fili duo puncta ubilibet ſumpta per rectam copulaueris: ea noua erit linea meridiana. Punctum autem borę duodecimę miniſter tuus ad horologiū adſtās tibi q̄uis abſenti pronūciabit.

## DE HORIS TEMPORALIBVS.

Actenus omnē horarū computum retulimus ad meridianū: hoc ē uel a meridie uel a media nocte ī itiū supputationis fecimus. Iā si libet ad horizōtē referre(quoniā pleriq; mos ē ab occasu solis horas computare: non nulli etiam ab oriente sole horis diurnis initium facere consueuerunt). ad occasum hoc modo reduces horas a meridie cęptas.
