## How the Front Drain Protects Health and Saves Time

Usually the drain-pipe and trap of a refrigerator are at the back. In a Bohn Refrigerator they are in front. This front drain is another of the many points that go to make up the superiority of the

# BOHN SYPHON REFRIGERATOR

Health demands that a drain be cleaned frequently. In its usual location, at the back of the refrigerator, the drain is hard to get at because of its position and because the contents of the refrigerator must be removed—a time-wasting nuisance. So back drains are cleaned all too seldom. The Bohn front drain can be lifted out in one piece, without disturbing shelves or food. To clean it thoroughly and return it to its position requires but a few seconds. This front drain is important not only on its own account but as an evidence of the thoroughness with which every detail of Bohn construction is thought out and worked out. Bohn superiority is traceable to this general excellence almost as much as to the special features—the Siphon System of rapid circulation; the ten-layer, heat-resisting walls (with Flaxinum insulation); the one-piece, round-cornered, non-cracking, non-chipping lining of Porcelain fused into steel, etc., etc. This superiority is not simply a claim; we can absolutely prove it. Bohn Siphon and other Bohn Refrigerators in great variety, at prices from \$19.00 up. Call if you can, or write for catalog.
