

# FERROSTAT

REG  
U. S. PAT OFF.

## IT WILL NOT BREAK

*the all metal vacuum bottle*

THE heavy gun carriage was bumping along at a lively clip when the Ferrostat bounced from the Lieutenant's saddle bag and fell in the path of the steel rimmed wheel. Pulling up short the Lieutenant dismounted and as he picked up the Ferrostat with its dented side, hope of refreshment from its contents vanished

A smile of surprise followed when he unscrewed the top and found, although the outside was battered, the inside had never a crack.

The steaming tea was safe!

Drop it, step on it, smash it, and the Ferrostat goes right on doing its duty. Heavy field guns will not roll over your Ferrostat but such was the experience of Lieut. W. A. Klinger and we are proud of his letter to us.

### Discriminate! Buy A Ferrostat!

All-metal construction makes it the *only* indestructible vacuum bottle. No glass or fragile parts to break and be replaced at constant expense.

The Ferrostat is *guaranteed* to possess thermal qualities which meet every need. It will keep boiling liquids hot for over twenty hours and ice cold liquids cold for over forty hours.

Two sizes—one quart and two quart. The larger Ferrostat is the one vacuum bottle on the market which gives its owner two quart capacity in a single vessel.

You will find the Ferrostat at most of the better stores. If not at yours, our factory will supply you.

A booklet telling why the Ferrostat is the successor to the vacuum bottles of the past, together with a copy of Lieut. Klinger's letter will be sent on request.
